PREFACE

Commodities reported in this summary, with abbreviations used in the tables, are shown on the next page. The actual State of origin was obtained, when possible, on reshipments and shipments out of storage. Mixed rail cars containing as much as 90 percent of one commodity were classified under the name of that commodity. When no single commodity comprised 90 percent, or more, cars were classified in their proper mixed category - mixed citrus fruit, mixed vegetables, etc. Some divergence from this 90 percent rule may be expected in view of the large number of railroad employees involved in preparation of the reports.

RAIL UNLOADS FOR PORT CITIES INCLUDE BOAT RECEIPTS OF IMPORTS (in carlot equivalents). The sum of unloads of certain imported fruits exceeds imports of these products as reported in shipment summaries. This is because all boat receipts at New York City are shown as unloads. Some are subsequently shipped to interior markets.

Truck unloads, expressed in carlot equivalents, are reported for 38 U.S. cities and 5 Canadian cities and represent the highest percentage of completeness available under local conditions in the markets covered. ESTIMATED PERCENTAGE OF COMPLETENESS IS SHOWN FOR TRUCK ON EACH CITY TABLE. These estimates take into consideration movement in wholesale commercial channels, including chain stores and farmers' markets. "Unknown" under State of origin largely represents quantities repacked enroute and actual State of origin was not available.

Special distribution tables for products reported in this summary are included for rail (inc. boat) and motortruck insofar as the latter is available. See index.

The unloads reported for the 5 Canadian cities were furnished through the courtesy of the Canadian Department of Agriculture. Cooperation on the part of railroad, express and steamship agents, as well as members of the produce industry, officials of State Departments of Agriculture and farmers' markets, is hereby gratefully acknowledged.
